

Build better models faster with synthetic data

Hi there!

We're thrilled you're using our datasets and hope that they are useful for your work!

Feel free to reach out with any questions. We're a team of dedicated ML engineers who became huge fans of synthetic data after using it for our own ML work.

We have lots of [tips and tricks we can share about how to improve model performance](#) and fix failure cases with synthetic data.

Are you looking for data that's different than what you see here? We specialize in building custom synthetic data APIs. APIs are built-to-spec and enable you to synthesize the exact data you need.

Happy building!
